

Urban vertical differentiation and symbiosis

based on the trend of religious secularization

LAM Chun Ho (Hudson) ? Portfolio Preview

Undergraduate portfolio excerpt ? For review only

The site is located in the "lower half of the city" area of Yuzhong District, Chongqing. The previous prosperity is no longer in Baixiang Street, and the current spatial environment is declining, requiring urgent renovation and renovation. The overall plan relies on the numerous historical, tourism, cultural, and community resources within the site to create a multi-dimensional, multi group, and three-dimensional symbiotic Baixiang Street community. The planning plan involves the demolition part, and compensation for partial relocation will be adopted.

Interpretation of Theme

Future symbiotic home is a people-oriented urban development concept that emphasizes community construction and social interaction.

In this vision, closer connections will be established between community residents, and public spaces will become more diverse and humane, thereby promoting the symbiotic development of the community.

More emphasis is placed on harmony and win-win outcomes in the community. It is necessary to promote interaction and integration among community residents through digital community platforms, diversified public spaces, encouraging community activities, creating friendly neighborhood relationships, and establishing community governance mechanisms, in order to achieve symbiotic development of the community.

Site Historical Tourism Resources

Anti Japanese War Relics
Yamen Relics
Port Opening Relics
City Wall Relics

Construction time

Buildings from various eras have been preserved
Most high-rise buildings are built after the millennium

Building storey

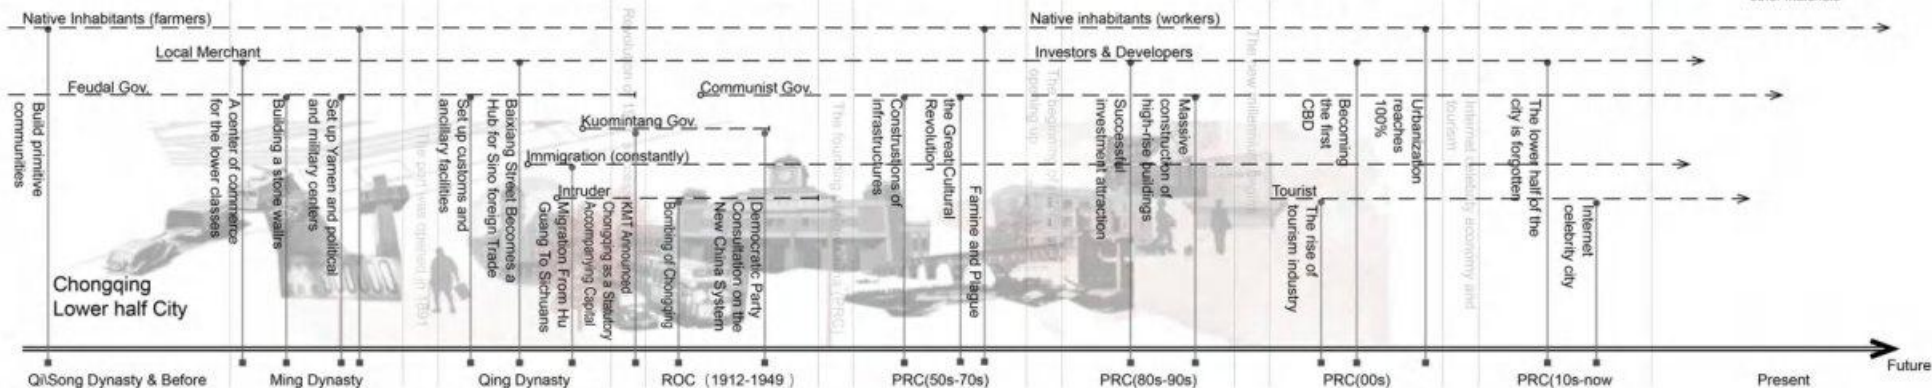

Many high-rise buildings in the Baixiang Yamen community
Fewer high-rise buildings in the southwest half of the field

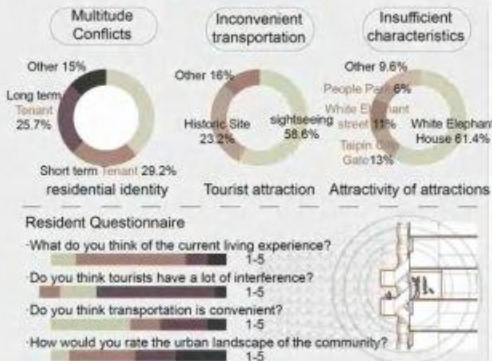

Building structure

Most buildings are made of steel and concrete
A few historical buildings are made of wooden concrete or other materials

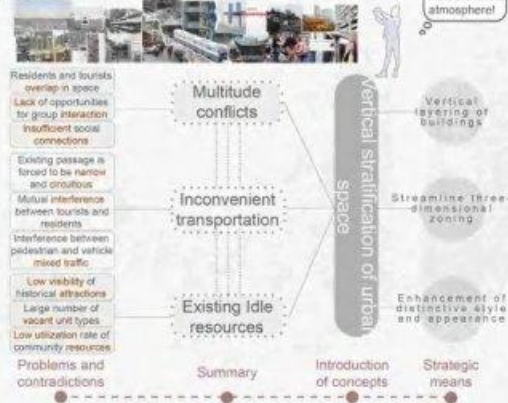

Problem Discovery

The southwest and northwest roads in the locality are susceptible to traffic congestion during peak hours. On holiday evenings, vehicular movement is more consistent, but the congestion period is prolonged.

Analytical Thinking

Postmodern Urbanism is an approach to urban planning and architecture that prioritizes diversity, complexity, and functionality. It mixes different functions and residential groups to create unique urban spaces with regional characteristics and energy. Vertical layering is used to enhance efficiency and vitality in the use of urban space.

Future 3-Dimensional Symbiosis Homeland

Architectural level

Redefining building functions

Redistribution of user groups

Lifestyle Redefinition

Landscape level

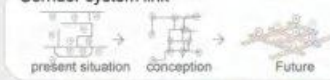

Changes in urban facade

-Vitrification transformation
-Vertical greening
Open some exterior walls to provide planting

Transportation level

Corridor system link

Dynamic and static route zoning

Analysis of traversing objects

Vegetation zoning planting

Factors to consider:
-Landscape, Slope, and Soil Quality
-Existing plants Microclimate

Design Goals

Tourism and residential symbiosis

A harmonious atmosphere for travelers and resident:

Community symbiosis

A convenient living environment for travel:

Resource symbiosis

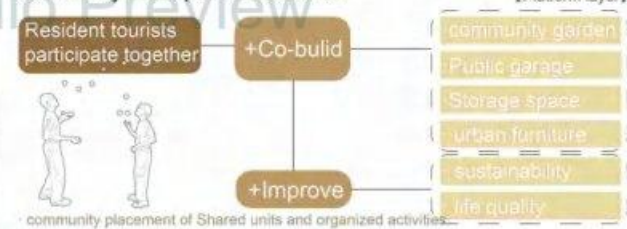

Historical blocks with resource activation:

LAM Chun Ho (Hudson) ? Portfolio Review

Portfolio Review

In this city, buildings of different heights have been cleverly designed as interdependent entities. The conversion layer of the building is used to accommodate commercial and community services, while the rest retains residential functions. This clear division of labor design enables more rational utilization and allocation of urban resources. The urban landscape presented in the figure showcases a brand new urban design concept, namely vertical differentiation and symbiosis.

Community Participation Mechanism

Sharing digital community platform

- It balances the usage of space of visitors and residents, and the sharing of information is convenient.

Win-win community creative market

- This attract tourists to visit, increase the visibility and vitality of the community

- 1 Yangze River Cableway
- 2 United International Office Building
- 3 Creative Office Business Park
- 4 Center sinking square
- 5 Landscape staircase
- 6 PRT starting station
- 7 People's Park
- 8 Talent Apartment/Relocation Housing
- 9 Xinlong Building
- 10 Renhe (Gulou) Primary School
- 11 Old Drum Tower Site
- 12 Old Drum Tower / Yamen Relics Park
- 13 Pocket park
- 14 Old Farmers' Byproduct Market
- 15 Tianqi Wanglong Residence

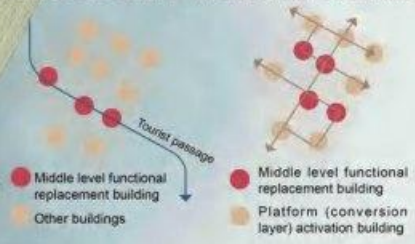

- 16 Former site of the Ministry of Foreign Affairs of the Republic of China Government
- 17 White Elephant House
- 18 PRT Cloud Rail Station End Point
- 19 Community parking building
