Cultural paths plan

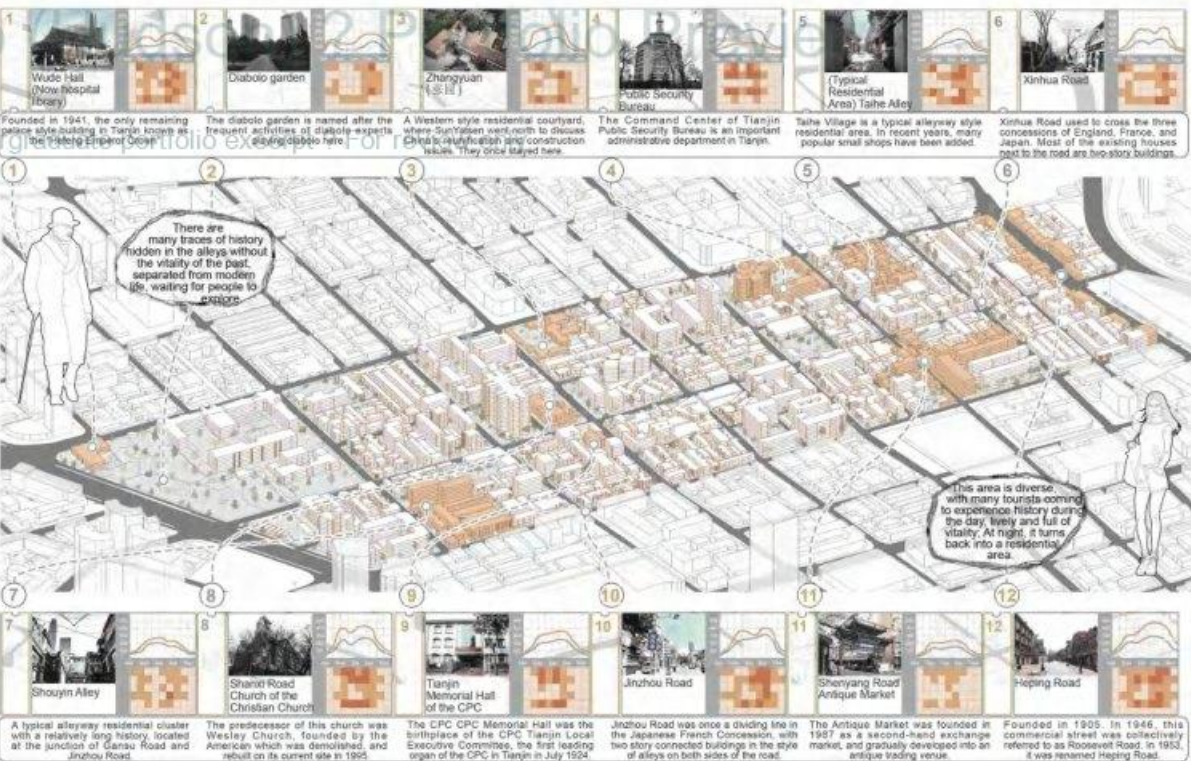

Planning of pedestrian ways both of technical and cultural ecology

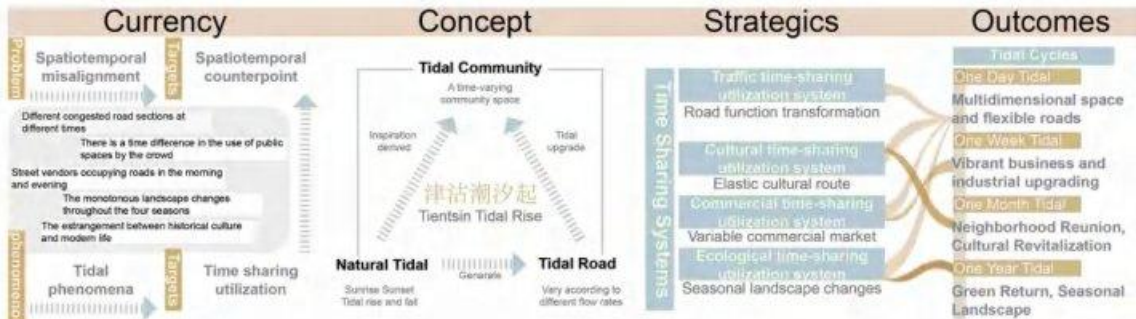

This design selected the entire block from Anshan Road to Jinzhou Road in Base A, with some areas of the base being the Anshan Road cultural area. This area is positioned as the path of the Xinhua Revolution, with three planned characteristic cultural experience paths passing through the base. Four subway lines pass around the base.

The overall architecture within the base presents a high-density and low volume state. The distribution of new and old building clusters is relatively concentrated, and the area is rich in historical relics, with a large number of historical buildings well preserved.

The cultural and tourism architecture of the site mainly exists in the form of courtyards; The public space of the venue is limited and disorderly, without a unified organization; There is a phenomenon of residential to commercial conversion at the bottom of the site, lacking connectivity and overall vitality.

Anshun Road and Hami Road are the main lanes, with the highest accessibility and connecting Nanjing Road and Zhanggizhong Road in a north-south direction. High accessibility of public transportation on the site. The parking problem at the venue is serious, affecting the normal opening of the venue.

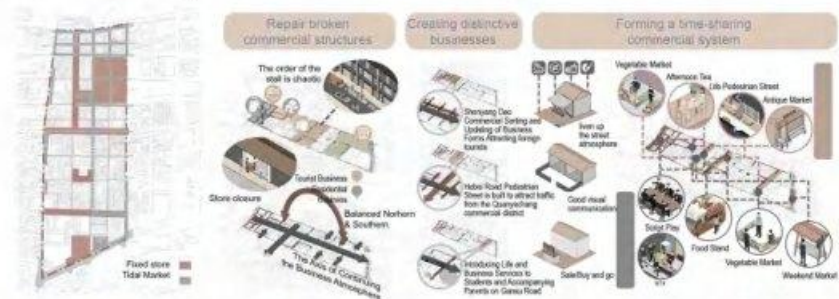

Traffic Tidal System

Implementing a shared-time system in a commercial area during urban renewal optimizes land utilization by accommodating multiple groups, fostering variety, reducing costs, and promoting collaboration

Commercial Tidal System

In urban areas with limited road infrastructure or high traffic congestion, a shared-time system for road utilization can help optimize traffic flow and improve overall efficiency.

In order to facilitate residents' daily life and meet the needs of cultural and tourism activities, the planning scheme proposes the use of spatial time-sharing utilization to targeted construction of tidal phenomena in the base. Four time-sharing utilization systems are introduced to match the spatial needs of the base at different time periods, and time-sharing node spaces are implanted to achieve system transformation, forming four different cycle scenarios. We hope to build this area into an urban renewal demonstration zone with flexible roads, diverse spaces, commercial revitalization, cultural revitalization, and picturesque adaptability to diverse target groups throughout the year.

Legend

Daily Places

1. Kongzhuyuan
2. Huwen Middle School
3. Primary School
4. Kindergarten
5. Nursery
6. Command Center of Municipal Public Security Bureau
7. Real Estate Management Bureau

The Revolution of 1911

Tourism

- I. Former Japanese Wude Hall

1) Invention of Studio Unit Board and Studio Assembly

Application (Patent) Number: CN202121339154.5

Survey	Requirement questionnaire Market Research Portability
Core concepts	Extensiveness Modularization
Innovative Points	Modular construction method Non fixed, High degree of freedom 1.0 Weak magnetic suction paper board
Deliberation of structural and material schemes	2.0 Strong magnetic suction small paper board 3.0 Structural insertion mortise and tenon type basswood board
Final plan	4.0 tenon and mortise style magnetic suction hollow basswood frame

Actual application process photo (Without backdrop)

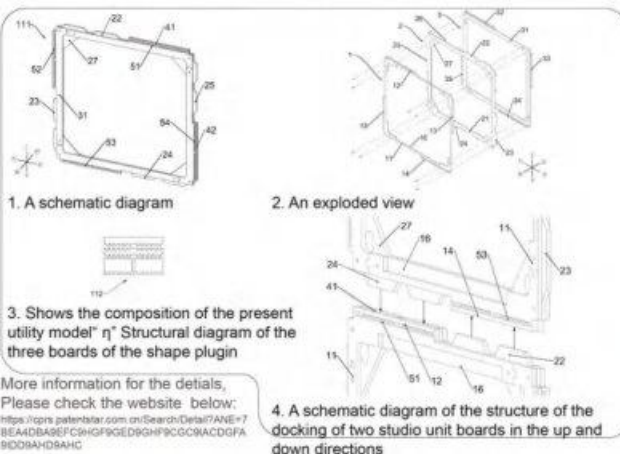

Finished product (Portable mode)

Finished product (Usage State)

Introduction

The studio assembly comprises multiple studio unit boards as described above. This utility model provides a photography studio unit board and a photography studio assembly. The size of the photography studio assembly is adjustable, the structure is flexible, and it is suitable for various shooting scenes. Installation and disassembly are simple, space is saved during transportation, and it is easy to store and carry. The shooting task is limited by time and location, and it is light in weight and low in cost.

2) Chaimi small house (柴米小筑) in Qinqi Village, Guangxi

Teamwork of 36 schoolmates and more in the Wuzhiqiao Team

Introduction

The project is called "Chaimi Xiaozhu", which is a convenient service space with a cafeteria as the main function and leisure and entertainment as the auxiliary. For review only

Architectural Image and Functional Layout
The building has 2 floors, with the first floor serving as a restaurant, kitchen, and bathroom; The second floor is an expanded area of the restaurant and also serves as a leisure and entertainment area, with an outdoor terrace for leisure viewing.

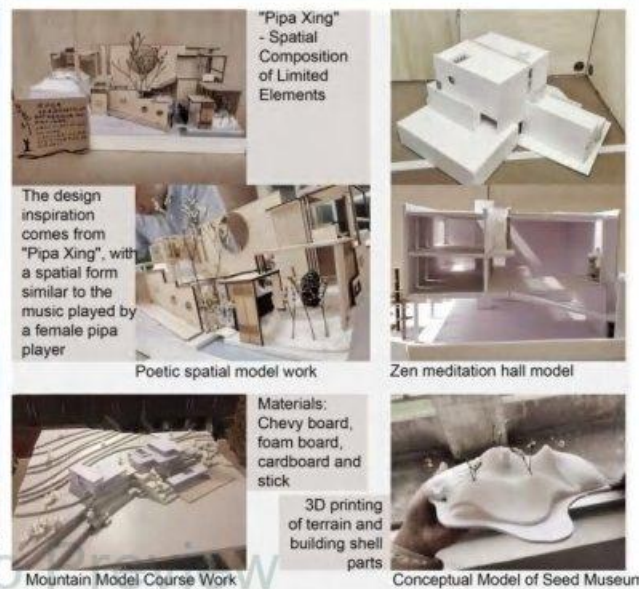

[Structure and Materials]

The building structure is a reinforced concrete beam column structure, with locally available concrete hollow block bricks as the filling material for the wall. The exterior facade is partially painted with white rough texture paint, presenting a simple modern style of gray and white in color.

Reflections on the journey of my Urban Study

My passion for urban planning dates back to my participation in the "Become a City Planner" summer camp organized by the Hong Kong Planning Department, where I created a conceptual city model of East Kowloon using recyclable materials. This experience brought me immense joy, encouraging me to explore deeper in this field. "Hong Kong 2030+" had attracted me during studying Geography "M4 Building a sustainable city". Now I finally has the chance to be in the bigger picture of the plan, start from pursuing a Master's degree in Urban Planning. This is a dream come ture.

4)Partial works during internship in Shenzhen Branch, China Academy of Urban Planning & Design
