Harmony in Motion:

Intergenerational Safety Town Renovation

Design Berif

This design aims to enhance the Sau Mau Ping Road Safety Town through functional optimization, intergenerational integration, and safety. It connects the reading and lecture rooms, adds stepped seating with storage, and flexible partitions for versatile use. A dedicated equipment area supports staff efficiency, while the workshop becomes a "half-storage, half-exhibition" space with rolling cabinets for display.

To improve landscape and transparency, 15% of the fence is removed to attract foot traffic, while patterns inspired by road maps are added. All trees are preserved, and the children's play area features a dual-purpose landscape structure for parent-child interaction.

Traffic education is innovated with updated road signs and a transparent platform for immersive learning. Overall, the design fosters practicality, ecology, and inclusivity.
